Office Action Summary

Application No.

10/031,856

Applicant(s)

JACOBS ET AL.

Examiner

Scott Bushey

Art Unit

1724

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 June 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-10, and 12-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ballard et al taken together with Madsen.

Ballard et al (Figs. 1, 2, 5-7, 13; col. 1, lines 39-44; col. 3, lines 69-71; col. 5, lines 44-46, 48-49, 53-62; col. 8, lines 43-47, 52-57, 63-65; col. 9, lines 9-13; col. 10, lines 17-28) teaches a bubble cap system for connection to a distribution plate within a cocurrent downflow reactor, wherein co-current upflow of the phases exists within the space between the riser and the cap of the bubble cap structure. Ballard et al also disclose a divider structure (318) between the riser and the cap, and a slot length within

Art Unit: 1724

the cap that may be about $\frac{1}{2}$ of the length of the cap itself, and that the cap may have a vertical dimension of roughly about 9 inches. Wherein half of roughly 9 inches, is about $4\frac{1}{2}$ inches, which approximates the slot length of 5 inches as recited by instant claim 20, absent an unexpected showing of criticality it would have been obvious to an artisan at the time of the invention, to modify the slot length of the Ballard et al apparatus from about $4\frac{1}{2}$ inches, as specifically taught by the reference, to 5 inches as recited by instant claim 20, such slot length being dictated by the liquid depth on the tray, as clearly discussed by Ballard et al.

Ballard et al also substantially disclose applicant's invention as recited by instant claims 1-10, and 12-19, except for the specific recitation that the divider disposed in the space between the riser and the cap has a length of at least 50% of the distance between the top of the riser and the bottom of the cap.

Madsen (Fig. 3) clearly teaches a bubble cap including a plurality of dividers (15) having a length in excess of 50% of the distance between the top of the riser and bottom of the cap. It would have been obvious to an artisan at the time of the invention, to modify the length of the divider of Ballard et al to be at least 50% of the distance between the top of the riser and bottom of the cap, in view of Madsen, since such would provide a convenient means for affecting the flow through the space by segmenting the flow along a majority of the length of the space, thereby reducing turbulence within the space. With respect to instant claims 2-4, 9, and 10, regarding the specific recitation that the divider has a length of 70% to 100% of the distance between the top of the riser and bottom of the cap, and that the cap has three to six dividers, Madsen does clearly

Art Unit: 1724

teach a plurality of dividers (15) having a length in excess of 50% of the distance between the top of the riser and bottom of the cap. Wherein such a divider length would clearly affect the flow through the space by segmenting the flow along a majority of the length of the space, thereby reducing turbulence within the space, it would have been obvious to an artisan at the time of the invention, to modify the length of the dividers and the number thereof, as taught by Ballard et al, in view of Madsen, to provide the desired level of flow control within the space of the bubble cap of Ballard et al, such modifications being dictated by the vapor/liquid ratio and the flow volume through the device per unit time. With respect to the precise divider length selected, one having ordinary skill in the art at the time of the invention would obviously recognize the tradeoff between increased mixing of the phases due to increased hydraulic resistance to flow found in a longer divider and undue pressure drop across the bubble cap that would also result from a longer divider length.

4. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over the reference combination as applied to claims 1-10, and 12-20 above, and further in view of Jacobs et al '965.

The reference combination as applied to claims 1-10, and 12-20 above substantially discloses applicant's invention as recited by instant claim 11, except for the swirl director attached to the riser.

Jacobs et al '965 (Figs. 16-19; col. 21, lines 22-61, 66, 67; col. 22, lines 1-8) disclose swirl director means (460) attached to the riser of a bubble cap. Wherein the dividers of the reference combination as applied to claims 1-10, and 12-20 above

Art Unit: 1724

provide a more uniform flow within the space between the riser and the cap, it would have been obvious to an artisan at the time of the invention, to modify the bubble cap of the primary reference combination to include swirl directors, in view of Jacobs et al '965, since such would further enhance the uniformity of flow within the bubble cap, as taught by Jacobs et al '965 (note col. 21, lines 57-59).

Response to Arguments

5. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new grounds of rejection.

Conclusion

6. Applicant's amendment necessitated the new grounds of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 1724

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Bushey whose telephone number is 571 272-1153. The examiner can normally be reached on M-Th 6:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on 571 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
